

Scope of Work - AI Campaign Expert & Client Success Manager:

BCP Assist:

1. Objective

To build an AI-powered Campaign Expert & Client Success Manager that acts as an intelligent execution layer across the campaign lifecycle.

The Agent will leverage the existing Campaign Knowledge Base, historical campaign data, current campaign information and approved external information to help teams plan, execute, monitor and close campaigns more efficiently, while proactively identifying gaps, risks, dependencies and opportunities for improvement.

The objective is to move from a reactive campaign management model to a proactive, intelligence-led execution model.

2. Agent's Core Scope

The Agent will function as a combination of:

Campaign Copilot that can assist any department or work function related to the Campaign Backend in suggesting, executing, approving any assisting in any task undertaken.

It will:

- Understand a campaign based on the information available across connected systems and the existing Knowledge Base.
- Identify the applicable campaign type, processes, dependencies and recommended execution approach.
- Leverage historical campaigns to identify similar precedents, past issues, successful approaches and relevant learnings.
- Continuously identify missing information, pending decisions, open dependencies and potential risks.
- Proactively nudge relevant teams/stakeholders on actions requiring attention.

- Provide recommendations based on current campaign status + historical intelligence + Knowledge Base guidance.
 - Surface current campaign insights, trends, anomalies and areas requiring attention.
 - Support teams with context around creative, communication and legal requirements using available approved information and historical references. We have templates for all key client deliveries and we would require you to
 - Translate campaign and platform complexity into clear business implications and recommended actions.
 - Capture campaign outcomes and learnings to strengthen future campaign execution.
-

3. Key Agent Capabilities

A. Campaign Understanding & Intelligence

The Agent will interpret campaign information and use the existing Knowledge Base to establish the appropriate campaign context, execution framework and requirements.

Output: A contextual understanding of *what the campaign is, how it should be approached and what needs to be considered. (Reference to Knowledge base and Campaign Historical Data)*

B. Historical Intelligence

The Agent will search and analyse historical campaign data to identify relevant precedents.

It should answer:

"Have we done something similar before, what happened, and what should we learn from it?"

This includes identifying:

- Similar campaign mechanics
- Similar brands / clients
- Similar consumer journeys
- Historical issues
- Previous UAT / execution learnings

- Successful approaches
- Exceptions and resolutions

C. Proactive Campaign Management

The Agent will continuously assess campaign information and identify:

- Missing information
- Pending inputs
- Open decisions
- Dependencies
- Approvals
- Upcoming actions
- Potential blockers
- Execution risks

It should proactively communicate these rather than waiting for users to ask.

D. Team & Stakeholder Orchestration

Based on the campaign context and Knowledge Base, the Agent will help determine who needs to act, what needs attention and when, supporting coordination across relevant internal teams, clients and partners.

Where system integrations permit, the Agent can create, update, chase or close tasks/actions in connected systems.

E. Current Campaign Intelligence

For campaigns with available live/current data, the Agent will identify meaningful signals such as:

- Emerging issues
- Participation trends
- Consumer behaviour
- Operational anomalies
- Reward / platform concerns
- Repeated issues
- Areas requiring intervention

The objective is to move from reporting what happened to recommending what should be done next.

F. Creative & Legal Readiness Support

The Agent will use available Knowledge Base information, historical campaign references and approved external information to provide first-level guidance on:

- Communication consistency
- Consumer clarity
- Brand considerations
- Campaign disclosures
- T&C considerations
- Potential gaps or inconsistencies

Final creative/legal approval remains with authorised stakeholders.

G. Campaign Learning & Institutional Memory

At campaign closure, the Agent should help consolidate:

What happened → What worked → What didn't → Why → What was resolved → What should be repeated → What should change.

These learnings should become usable intelligence for future campaigns.

4. System / Data Ecosystem

The Agent should operate across the existing ecosystem rather than becoming another standalone platform.

Primary Knowledge & Data Sources

- Campaign Knowledge Base — source of established campaign processes, SOPs, rules and domain knowledge.
- Historical Campaign Repository — source of past campaign execution, outcomes, issues and learnings.
- CRM / Campaign Management System — campaign brief, campaign type, client information, estimates and key campaign attributes.
- Project Management System — tasks, ownership, timelines, dependencies and execution status.

- Live Campaign / Platform Data — current campaign performance and operational signals, where available.
- External / Public Information — relevant approved brand/company information and publicly available references.

5. Agent Output Layer

The Agent should primarily provide actionable intelligence, not just information.

Typical outputs include:

- Campaign readiness status
- Missing information / gaps
- Open and pending actions
- Risk alerts
- Proactive nudges
- Historical campaign precedents
- Recommendations
- Current campaign insights
- Stakeholder/action summaries
- Creative / legal observations
- UAT / go-live considerations
- Campaign learnings and Insights

6. Decision & Recommendation Framework

Wherever possible, recommendations should follow:

Context → Evidence → Risk → Recommendation → Action → Owner → Timeline

The Agent must clearly distinguish between:

Confirmed Information | Historical Precedent | Recommendation | Assumption |
Pending Confirmation | Risk

It should not independently invent or override campaign mechanics, legal decisions, client approvals or platform capabilities.

7. Success Definition

The Agent will be considered successful when it enables the organisation to:

- Reduce campaign planning and coordination effort
- Identify gaps earlier
- Reduce avoidable execution/UAT issues
- Improve cross-team accountability
- Reduce dependency on individual campaign managers' institutional memory
- Accelerate campaign go-to-market
- Improve consistency of campaign execution
- Provide better visibility to clients and internal leadership
- Convert historical campaign experience into reusable intelligence
- Continuously improve campaign execution based on real outcomes

North Star

The Agent should act as the organisation's Campaign Brain—using what we know, what we have learned and what is happening now to proactively determine what needs attention, what could go wrong and what should happen next.

Indicative Scope Boundary

In Scope

Intelligence, recommendation, orchestration, monitoring, nudging, historical learning, campaign insights and execution support across the campaign lifecycle.

Dependent on Integrations:

Zoho Projects integration for accessing Campaign aka Projects. The AI Agent can create, nudge and complete tasks end to end basis information available under Knowledge Base.

Campaign Related Whatsapp Group chats – Read only no action to be taken by AI bot herein. Only for gathering campaign related tasks, chase deadlines etc

Microsoft Teams – Read only again no action required will just be used to assimilate tasks, create tasks for Servicing or internal teams basis latest conversations transcripts etc.

Gmail- Official email communication reading, adding tasks to zoho basis that and drafting ready to send emails basis instructions available in Knowledge base on varied

scenarios and reviewing past historical data and templates.

Additional Notes:

Any action requiring authorised human sign-off remains with the relevant human stakeholders at no stage will the Ai agent override or proactively take decisions or close it at their end specifically pertaining to below:-

- Legal approvals
- Client approvals
- Technical or operational Change requests
- Financial decisions
- Change in campaign mechanics
- High-risk business decisions
